Important information for new VO7 PLUS owners

On the first series of the VO7 PLUS, the belts have been installed in the **wrong position as per the picture below.**

Before you start your first ride, please ensure that the belts are installed in the narrow slots otherwise the retaining toggle pins may slip out and break. The larger slots are meant for closing the belts across.

New skike owners need to be aware of how to inflate tyres correctly. We recommend using a pump with a gauge. Use caution when inflating if using a high-volume pump as it is very easy with just one plunge to exceed 100psi and blow the tube immediately.

A high-pressure, low-volume pump such as a shock-pump for mountain bikes is ideal and easy to carry whilst skiking.

Enjoy skiking and thanks for purchasing our products.

Regards,

Len & Marshall
